

Added: Integrating the new workflows for cash flow management, predictive procurement, centralized lead routing, relevant reports, and supplier-aligned pipeline execution.

1. Executive Summary

The objective of this initiative is to transition the Cabio sales organization from a reactive, activity-based model to a highly predictable, data-driven Sales Operating System (SOS). Currently, daily operations suffer from unpredictable territory planning, leading to uneven geographic coverage. This system enforces structured territory management, strict lead-to-closing ratios, and preserves institutional memory. Furthermore, it addresses critical operational gaps by integrating sales forecasting directly with procurement to protect cash flow, establishes a centralized routing mechanism for marketing-generated leads, and **bridges the operational gap between Cabio and key suppliers (e.g., Sonoscape) by enforcing market-specific qualification and transparent, weighted pipeline reporting.**

2. User Roles & Access Hierarchy

The system must support a multi-tiered organizational structure, specifically accommodating Cabio's matrix reporting lines for different product verticals, as well as external supplier integration for high-stakes deals:

- **Trainee / Junior Sales Engineers:** Dashboard focused on top-of-funnel metrics, logging scanning visits, and basic territory coverage. *Note: Because junior staff handle mixed portfolios (Critical Care and Ultrasound), the system must allow them to report to multiple vertical managers simultaneously.*
- **Senior Sales Staff:** Advanced dashboard for managing complex accounts, funneling leads, and standard closings.
- **Star Closers (Closing Experts):** Elite performers (e.g., 1:2 or 1:3 closing ratios). Their view highlights high-stakes deals ready for final negotiation, requiring system-level authority to log on-the-spot pricing decisions.
- **Zonal / State Managers (Product Vertical Focus):** Geographically focused leadership separated by product lines (e.g., distinct managers for Critical Care vs. Ultrasound in North Kerala). Dashboards must filter data specific to their product domain while overlapping the same geographical territory.
- **Marketing / Lead Coordinator:** A centralized administrative role responsible for capturing and routing inbound leads from external platforms (e.g., IndiaMART).
- **Supplier Corporate POC (External):** Limited, triggered access for strategic partners (e.g., Sonoscape's Pranav) to assist in closing high-ticket deals over ₹25 Lakhs and to review weighted pipeline dashboards.
- **Top Management:** Full-tier visibility focusing on organizational forecasting, tracking the "Plan vs. Actual" gap, and utilizing data for strategic monthly reviews and procurement decisions.

3. The Cabio Hybrid Pipeline Architecture

To ensure high adoption rates, the system will retain familiar Cabio terminology while enforcing verifiable milestones through mandatory checklist items and automated probability weightings.

3.1 Core Sales Pipeline

CRM Macro Stage (Reporting View)	Stage Objective	Mandatory Checklist to Advance (Sales Rep View)	Legacy CRM Stages Mapped	Sonoscape Partner Requirements & Triggers (NEW)
1. Requirement & Initial Quote	Sizing up the clinical and financial opportunity.	- [] Discussion with Doctor (Determine Portable vs. Fixed) - [] Send Initial Quotation (Indicative pricing)	- Lead Creation - Marketing visit/Call - Lead Follow up	Region-Specific Qualification: CRM must dynamically load standard criteria (Kerala) or stricter institutional credibility criteria (Karnataka). Contextual Collateral: Reps must use tier-specific brochures (10L-25L vs. >25L).

2. Demo & Evaluation	The customer is actively testing the equipment. (High delay risk).	- ☐ Get PNDT approval for Demo (~1 week) - ☐ Conduct Demo at hospital (0.5 to 4 days) - ☐ Collect Demo Feedback (Bio-Med/Radiology) - ☐ Send Revised Quotation - ☐ Wait for Competition demos to complete	- Demo - Demo Follow up Meeting/Call	Weighted Probability: Deal locked at 50%. Competitor Tagging: Rep must log specific competing brands (Samsung, GE, Mindray) to advance.
---------------------------------	---	--	---	---

3. Active Negotiation	Clinical evaluation is complete. Trigger Managers & Star Closers.	- [] Conduct Negotiation Sitzings (2-4 sittings) - [] Manager involved to close the deal - [] Send Updated Quotation & Proforma Invoice	- Negotiation Meeting - Negotiation follow up	Weighted Probability: Deal locked at 70%. >₹25 Lakh Trigger: Deals above this value automatically loop in Sonoscape Corporate (Pranav) and internal Star Closers.
4. PO & Advance (Contracting)	Verbal agreement reached. Waiting on hospital bureaucracy/funds.	- [] PO Issued by hospital - [] Advance Payment received (25% - 50%) - [] Obtain NOC (Required for delivery)	- Po Follow up - Payment follow up	Weighted Probability: Deal locked at 100%. Procurement Sync: Deal triggers predictive procurement system to order inventory within the 90-day credit window.

5. Delivery & Installation	Funds secured, operations take over to fulfill the order.	- ☐ Machine delivered to Client Premises (15-30 days) - ☐ Form B approval received (~1 week) - ☐ Machine installed by Service Engineer - ☐ Training done by Application Engineer	- Installation - Application Support	Install Base Logging: Location data captured for the new map-based "Reference Customer" Locator.
6. Closed (Outcomes)	The deal reaches its final disposition.	- ☐ Balance Amount Paid (for Closed Won)	- Closed Won - Closed Lost	Advocacy Tagging: Customer must be tagged as a "Promoter," "Neutral," or "Detractor" to dictate future

			- On Hold	reference routing.
--	--	--	-----------	--------------------

3.2 Post-Sales & Advocacy (Automated Account Management)

Deals moved to "Closed Won" trigger automated workflows to map the customer's journey toward "Brand Advocate" status:

- **Customer Advocacy Tagging:** Installed base is strictly categorized by advocacy quality ("Promoter", "Neutral", "Detractor").
- **Every 3 Months:** CRM pings Sales Staff to conduct an experience check-in.
- **Every 6 Months:** CRM pings Sales & Service Team to schedule Preventive Maintenance.
- **Advocacy Content:** System automatically triggers targeted marketing collateral (R&D updates, new models) to established customers.

4. Core System Workflows & Rules

4.1 Planning & Territory Management

- **Automated Task Carryover:** Uncompleted daily/weekly visits must automatically roll over to the subsequent week's plan.
- **The Quarterly Sales Cycle Enforcement:** The software must track a 3-month rhythm to prevent the "lead vacuum": Month 1 (15 days scanning), Month 2 (10 days funneling), Month 3 (5 days closing).

4.2 Customer Classification & "Reference Customer" Locator

- **Financial Behavior Categorization:** Hospitals must be automatically tagged by payment history ("Good Paymasters" vs. "Problematic/Delayed Payers").
- **Install Base Geolocation:** The CRM features a searchable, map-based database of existing Sonoscape installations. When pitching, the system uses geolocation to display the nearest reference customers, filtering exclusively for those tagged as "**Promoters**".
- **Product-to-Hospital Mapping:** Track which specific product lines are successfully selling at which hospitals to auto-generate cross-sell target lists.

4.3 Centralized Lead Routing (IndiaMART & Inbound)

- **Central Inbox & Manual Assignment:** A holding area captures leads from marketing efforts (e.g., IndiaMART). Leads are held securely until a manager reviews and assigns them based on territory or vertical.

- **Source Tracking:** The system permanently tags the lead source throughout its lifecycle to accurately measure ROI.

4.4 Predictive Procurement & Cash Flow Protection

- **The 90-Day Supplier Window:** Cabio operates with a 90-day credit window. If inventory is not sold/paid for within this window, Cabio assumes high-interest project finance loans.
- **Pipeline-Triggered Purchasing:** Integrates sales forecasts with procurement to ensure inventory is ordered only when financially safe.

4.5 High-Ticket Deal Routing (The >₹25 Lakh Rule)

- **Value-Based Trigger Alert:** The Bangalore team and junior staff must not sell high-end machines strictly on price. If a generated quote exceeds ₹25 Lakhs, the system automatically flags the deal and loops in the Supplier Corporate Team alongside Cabio's internal "Star Closers" the moment the deal enters "Stage 3: Active Negotiation."

4.6 Contextual Marketing Library & Competitor Tracking

- **Targeted Collateral Repository:** Sales reps must move away from a "one-pitch-fits-all" approach. The CRM houses specific brochures and spec sheets provided by suppliers, strictly segmented by machine tier (e.g., 10L-25L vs. >25L).
- **Competitor Tracking System:** Sales staff are forced to log the specific competitor (Samsung, GE, Mindray) pitching against them, creating actionable win/loss intelligence for Haroon and the supplier.

5. Analytics, Reporting & Management Dashboards

The CRM must be configured with the following specialized reports to enable top-down visibility and data-driven monthly reviews:

- **Supplier Monthly Review Dashboard (NEW):** A dedicated, automated export of active Sonoscape leads featuring exact probability weightings (50% for Demo, 70% for Negotiation, 100% for PO) to provide the supplier with a standardized, reliable pipeline view.
- **Competitor Win/Loss Tracker (NEW):** Reporting generated from the CRM's competitor tagging feature, allowing Cabio to analyze win rates against specific brands like Samsung, GE, and Mindray across different regions and price tiers.
- **Data-Driven Ordering & Cash Flow Predictor:** Uses the CRM sales forecast to calculate precisely when to order inventory, aiming to order stock only for deals at "PO Received" or "Final Negotiation" to respect the 90-day credit window.
- **Supplier Negotiation Data (3-Month Rolling Forecast):** A 3-month rolling forecast report used to explicitly push back against suppliers demanding Cabio take on excess, unneeded inventory.

- **Lead Source ROI & Velocity Matrix:** A breakdown of conversion rates, average deal size, and sales cycle speed segmented by origin (e.g., IndiaMART vs. Field Prospecting).
- **Product Vertical Performance Dashboard:** Filtered pipeline view for Zonal Managers showing win/loss ratios and geographic heat maps separated by product line (Critical Care vs. Ultrasound).
- **The "Pipeline Health & 3x Rule" Dashboard:** Shows if a salesperson's active pipeline holds at least 3x their revenue target, utilizing Red, Yellow, and Green visual indicators.
- **Geographical Heat Maps:** Color-coded tracking (Red/Yellow/Green) of visit frequencies across specific Cabio territories over a rolling 6-month period.
- **The "Plan vs. Actual" Execution Report:** End-of-week/month reporting showing the exact gap between scheduled plans and actual executed tasks.
- **Institutional Memory via "The Push":** A dedicated field for management to log tactical instructions during monthly reviews, ensuring historical context is preserved.

6. Enterprise Integration & Organizational Alignment

To prevent a fragmented IT infrastructure, this SOS must act as the primary node connected to broader organizational capabilities:

- **Accounting & Invoice Integration:** Bidirectional flow of financial data to automatically update a hospital's "Financial Behavior Category" upon invoice payment or delay.
- **Procurement ("Ordering Software") Sync:** Integrating directly with the predictive procurement rules to time orders perfectly with supplier credit limits.
- **Baseline IT Infrastructure Audit:** A comprehensive IT surveillance report to map out existing tools (HR systems, cash flow management) to ensure clean integration.
- **Mandatory Induction Meeting:** Cabio leadership and the consulting team must commit to a formal Induction Meeting to align all stakeholders, explain the new rules, and establish the new top-down accountability standard.
